Industrial Wireless Management

Korenix Mobile Manager Utility

- Easy tool for Korenix Mobile Devices' management, Quick Start without installing,
- Device Monitoring: Get live information about the mobile/cellular devices
- Cellular Type Management: Cellular type, SIM settings, User Info and GPS Position information
- Cellular Communication Watchdog Enable/Disable and Auto-Reconnect settings
- Ethernet Port Management: Network Mode, LAN IP settings
- Device Maintenance: Backup and Restore the configuration file, firmware upgrade,
- Event Log Window and Panel
- Export and Save the connected status
- Low system performance request

Overview

After the mobile devices are applied to the field, the issue of mobile devices' access is a important topic of administrators. Due to the limited number of public address, most carrier provider may offer you the private IP for the cellular router. The carrier provider may have different IP policy, for example, the IP address may be changed every a period of time, may get the different IP address while you reboot the device...etc.

The Korenix Mobile Manager is a simple utility to resolve the issue of mobile devices' inabilities to be accessed from the internet. With a PC and a public IP, the PC can be the Mobile Manager Server. Configuring the Mobile Manager Server's IP address on your mobile device, then the up-to-date IP address, cellular type, Ethernet port type... network status can be reported to the server. The utility also provides you device management and maintenance features.

System Architecture

Specification

Main Program	
Main Screen	The device information includes: Item ID, Model Name, MAC Address, Device Name, IP Address, TCP Port Number, Firmware Version, Status, Last Connected Time
Login	User Name and Password (Default: admin/admin)
Cellular Panel	Cellular Status: Last Update Time, Cellular Enable/Disable, Carrier Provider, Service Type , IMEI, Signal Strength, Connection Status, Cellular IP Address SIM Control: SIM Index, SIM Selection (support dual SIM model) SIM Card: SIM Status, APN Name, Authentication Type, User Name, Password Advanced Setting: Watchdog Enable/Disable, Watchdog IP, Watchdog Interval, Watchdog Fail Count, Auto-Reconnect, Reconnection Delay Time, Reconnection Retries Times, Cellular Redundant Enable/Disable GPS Setting/Status: GPS Enable/Disable, Latitude location, Longitude location
Network Panel	Last Update Time Network Mode: Bridger/Router Selection LAN IP Type, LAN IP Address, LAN Netmask, LAN Gateway, LAN DNS 1, LAN DNS 2
